# GLUETEC 2GLUE50 DOUBLE CARTRIDGE 50 ML

SMART PACKAGING SOLUTIONS. THE NEW CARTRIDGE SYSTEM FOR TWO-COMPONENT ADHESIVES FROM GLUETEC.

No uncontrolled curing thanks to innovative closure pin

Easy-use outlet: open the cap, put the mixer on and go!

Optimised product outlet: easy and safe gluing even at higher viscosity

Compatible with all standard bayonet locks

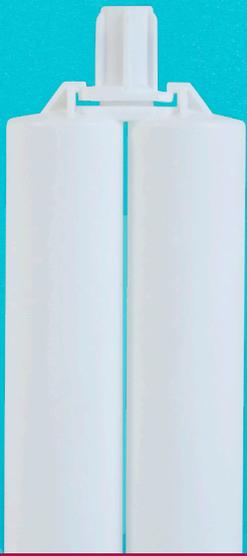

Long-life materials: optimally matched to the adhesives

Unbeatable price-performance ratio

Can be used in all common dosing systems

**WE CAN DELIVER.**

## THE SMART CARTRIDGE - GLUETEC 2GLUE50

After the successful introduction of the GLUETEC 2GLUE25 twin syringes, GLUETEC now also offers a high-quality and attractively priced alternative to the 50 ml cartridges of the market leader. The new GLUETEC 2GLUE50 cartridge meets the highest demands with regard to application, tightness and storage.

### **Size 50 ml**

Small container sizes with a volume of 50 ml and a mixing ratio of 1:1 have established themselves in a large number of adhesive applications. This way you always use fresh adhesive.

### **The bayonet cap**

This closure guarantees quick opening and reclosing - without cross-contamination of the two adhesive components. Additional safety elements are not required. So changing the mixing tips is quick and easy!

### **Innovative closure pin**

A V-shaped recess on the cap and a corresponding counterpart on the cartridge ensure that this cap can only be reapplied in the correct position. This reliably prevents drying out or mutual contamination of the adhesive components during reclosure.

### **Available in PP and PBT**

Due to our many years of experience with adhesives of all kinds, we know that the materials PP and PBT are the optimal packaging solutions. Both the high quality and the good price-performance ratio of these plastics are definitely profitable.

### **Maximum safety thanks to piston retention**

Inside the cartridge there is an innovative piston retention with venting system.

No dripping, no accidental opening from the rear, no self-opening due to possible expansion of the product. This makes handling even safer for the user.

### **Matching mixing nozzles and dosing guns**

2GLUE50 fits into any standard 50 ml dispensing gun. The bayonet system is compatible with GLUETEC mixing tips as well as bayonet mixing tips from other manufacturers. For the optimal application we recommend the 3D-Dynamix and GLUEMIX mixing tips.

### **New GLUEMIX mixing tips**

The optimized GLUEMIX mixing spout is especially low-loss and impresses by its favourable price. Equally good mixing with a 2,5 cm shorter mixing tube leads to approx. 30% less material in the mixing tube. This leads to a significant material saving with every change of the mixing tip.
